----------------	---

ACCESS THREATS

WHERE CAN NOX PROTECT?

THREAT \ 1 **REAR FENCE VIA RAILWAY**

There is relatively easy access from the railway line through the bushes at the rear of the building. These bushes allow the potential intruder to monitor activity whilst remaining concealed. This area is covered by CCTV.

THREAT \ 2 **STAR LANE**

There is easy access which is commonly used for local people passing through to use the Business Park which allows potential intruders to evaluate the premises during the day and then gain easy access at night.

THREAT \ 3 **MAIN ENTRANCE**

Obviously there is access through the main entrance to the Business Park which allows potential intruders to enter with a vehicle. There are no cameras at the entrance to the Park which can track day-to-day activity

PROPERTY THREATS

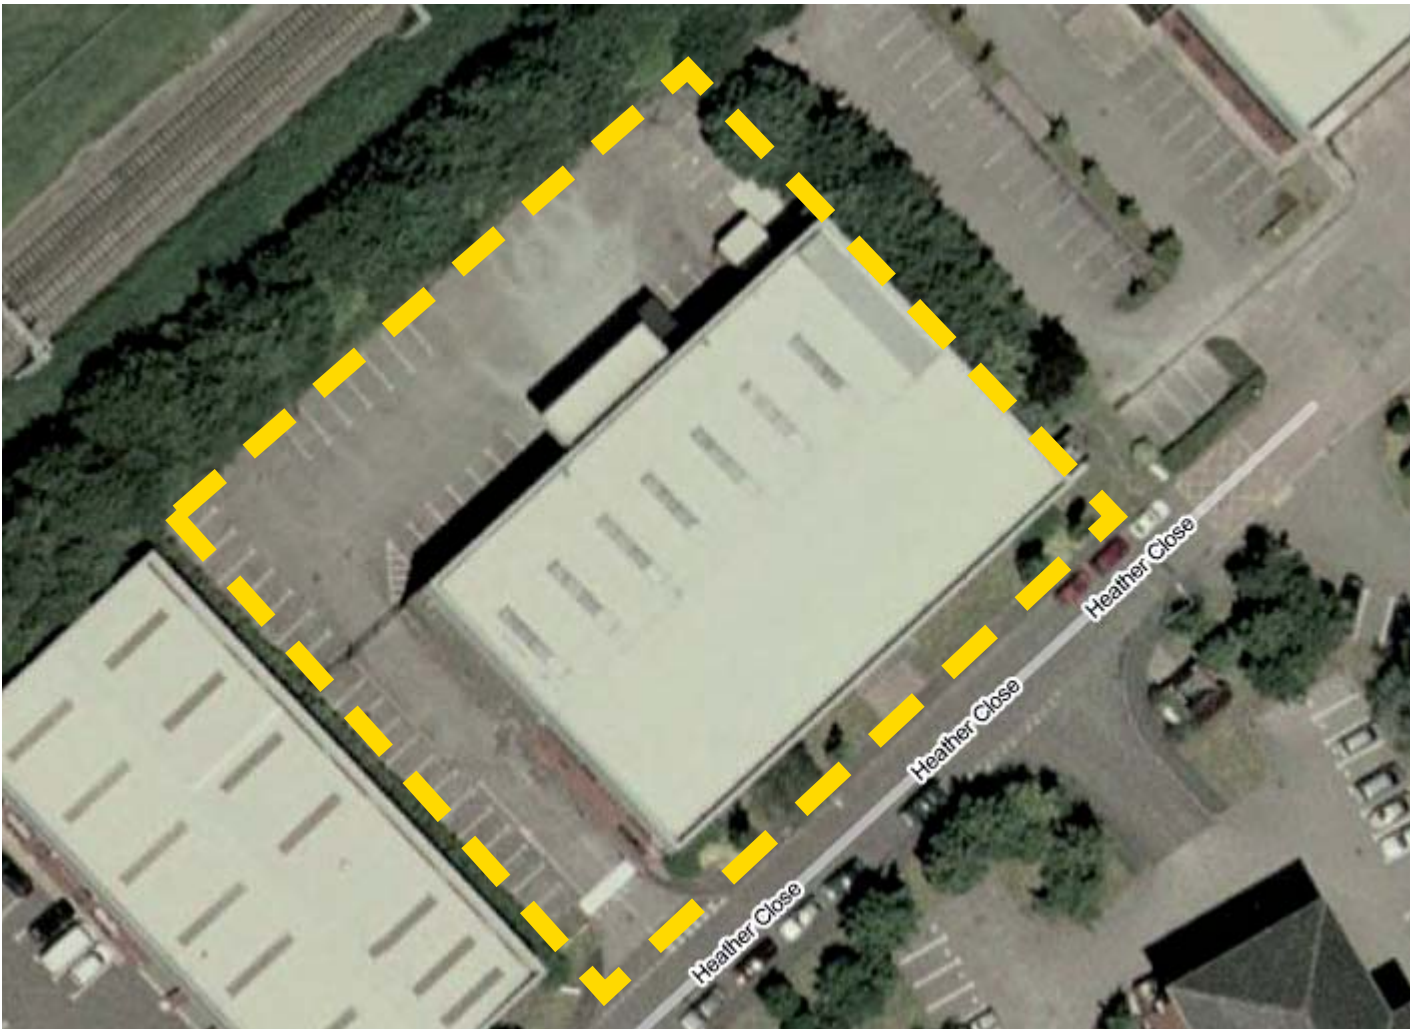

WHERE CAN NOX PROTECT?

THREAT \ 1 INTERNAL

The building itself has important equipment containing items such as computers, printers, flat screen televisions on site at any time.

THREAT \ 2 EXTERNAL

As well as the issues of theft another problem facing the site is attempted break-ins which can and have damaged the building and entrances. In many cases the cost to repair the damage can out weigh the cost of the items the intruder manages to remove.

BOUNDARIES

WHERE CAN NOX PROTECT?

BOUNDARIES

As the premises are located in public Business Park it has no real boundaries, there is a surrounding fence to the premises but this can be overcome quite easily. The building itself provides cover from the neighbouring premises providing potential intruders time to attempt any criminal activities.
